

## **LEARNING OBJECTIVES**

**10-20-22**

**PERFORMANCE GAP/ ACTIVITY NEED:** Older Adults make up a large population of cancer patients. It is important to properly assess/manage/monitor these patients in the setting of any oncologic diagnosis. There is data that the community is under-utilizing geriatric oncology tools to evaluate older cancer patients. Health care providers can utilize these geriatric tools to assess their cancer patients. [KW, personal communication, 10/18/22].

**DESIRED OUTCOMES:** At the end of the activity, attendees will be able to:

- note specific domains of the geriatric assessment.
- use the CARG tool.
- use the crash tool.
- use the Prognosis tool.

**LEARNERS:** surgeons, medical/radiation oncologists, geneticists, OBGYN, internists, general/family practitioners, radiologists, pathologists, pharmacists, research

**DESIRABLE PHYSICIAN ATTRIBUTE:** provide patient centered care, work in multidisciplinary teams

**CULTURAL/LINGUISTIC DIVERSITY/IMPLICIT BIAS (AB241)** Reflect on the patient populations most affected and consider how implicit bias may impact appropriate care of these patients. Every patient is unique, regarding their social, cultural, economic situations, and we as physicians should be aware of these differences.
